PROFESSIONAL SUMMARY

Full Stack Developer and AI Engineering enthusiast with production-deployed web applications, multi-provider AI systems, and automated AI pipelines. Proficient in React, Next.js, Node.js, Python, and modern AI tooling including Claude API, MCP, n8n, and Ollama. Proven ability to architect and ship real freelance client projects and hackathon-level AI platforms from concept to live deployment.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C#, C++, SQL, HTML, CSS
Frontend: React, Next.js, Vite, Tailwind CSS, GSAP, Lenis, Responsive Design
Backend: Node.js, Express.js, REST APIs, Authentication
Database: Firebase, SQL
AI & Automation: Claude API, Gemini Vision AI, MCP, AI Agents, n8n, Ollama, Prompt Engineering
Tools: Git, GitHub, GitHub Actions, Vercel, Netlify, Postman, VS Code

PROJECTS

SnapTrace AI | *TypeScript · Gemini Vision AI · Vercel* | github | snaptrace-ai.vercel.app

Hackathon Project — IntelliAI Arena 2026 | AITR Indore

- Built a photo-first AI-powered lost-and-found platform enabling image-based item reporting, matching, and recovery
- Integrated Gemini Vision AI for intelligent image recognition and semantic item identification from user-uploaded photos
- Architected full-stack TypeScript application with CI/CD pipeline deployed to live production on Vercel
- Delivered functional MVP from ideation to live deployment within hackathon time constraints

Personal AI Assistant — JARVIS | *Python · Multi-Provider LLM · Ollama* | github

- Engineered a hybrid AI assistant with voice input and screen context using a 5-provider cascading LLM chain (Cerebras → OpenRouter → SambaNova → Groq → Ollama) for cost-optimized inference
- Implemented real-time web search via DuckDuckGo API and URL content extraction using Trafilatura with BeautifulSoup as fallback
- Designed provider failover architecture routing requests by task type across 5+ AI providers for zero-downtime inference
- Deployed locally on Windows with Ollama integration for offline local model inference

AI Tic Tac Toe with Multiplayer | *C# · .NET · Minimax · Alpha-Beta Pruning* | github

- Implemented Minimax algorithm with Alpha-Beta Pruning for optimal, unbeatable AI opponent decision-making in C#
- Built two-player multiplayer game system with complete turn-based game state management and session handling
- Designed modular architecture decoupling AI logic, game state, and rendering layers following SOLID OOP principles

Waterfall Restaurant Website | *React · Vite · GSAP · Lenis · Vercel* | waterfall-restaurant-live.vercel.app/ | Github

Freelance Client Project — SamTechX

- Developed and shipped production-ready client website using React + Vite with a performance-optimized build pipeline
- Implemented premium smooth-scroll with Lenis and GSAP-powered UI transitions for high-end user experience
- Built fully responsive layout optimized across mobile, tablet, and desktop with cross-browser compatibility
- Deployed to Vercel with continuous deployment pipeline connected to GitHub repository

CERTIFICATIONS

Anthropic: Claude 101 · Introduction to Agent Skills · Introduction to Model Context Protocol · AI Fluency: Framework & Foundations · AI Fluency for Students
Other: Prompt Engineering with ChatGPT · Database Management System (NPTEL) · Ultimate Web Development Course
Hackathon: Participated in multiple hackathons to build real-world AI and full-stack solutions, enhancing problem-solving, collaboration, rapid prototyping, and software development skills under tight deadlines.

EDUCATION

Bachelor of Technology — Computer Science & Information Technology

Acropolis Institute of Technology and Research, Indore | RGPV University | 2024 – 2028 | CGPA: 6.92
